Instructions

^ COLLAPSE ^

Guide:

1. Make sure you're in the main branch locally and `git pull origin main` any pending changes
2. Make a new branch per the recommended branch name below (git checkout -b ...)
3. Grab the template code from https://gist.github.com/MattToegel/fdd2b37fa79a06ace9dd259ac82728b6
4. Create individual Java files for each problem and save the files inside a subfolder of your choice
   1. The should end with the file extension in lowercase .java
5. Move the unedited template files to github
   1. `git add .`
   2. `git commit -m "adding template files`
   3. `git push origin <homework branch>` (see below and don't include the < >)
   4. Create and open a pull request from the homework branch to main (leave it open until later steps)
6. Note: As you work, it's recommended to add/commit at least after each solution is done (i.e., 3+ times in this case)
   1. Make sure the files are saved before doing this
7. Fill in the items in the worksheet below (save as often as necessary)
8. Once finished, export the worksheet
9. Add the output file to any location of your choice in your repository folder (i.e., a Module2 folder)
10. Check that git sees it via `git status`
11. If everything is good, continue to submit
    1. Track the file(s) via `git add`
    2. Commit the changes via `git commit` (don't forget the commit message)
    3. Push the changes to GitHub via `git push` (don't forget to refer to the proper branch)
    4. Create a pull request from the homework related branch to main (i.e., main <- "homework branch")
    5. Open and complete the merge of the pull request (it should turn purple)
    6. Locally checkout main and pull the latest changes (to prepare for future work)
12. Take the same output file and upload it to Canvas
    1. *This step is new since GitHub renders the PDF as an image the links aren't clickable so this method works better
    2. *Remember, the github process of these files are encouragement for your tracking of your progress

Branch name: M2 Java Problems

Tasks: 8 Points: 10.00

● **Problem 1** (3 pts.)
∧ COLLAPSE ∧

● **Task #1 - Points: 1**
∧ COLLAPSE ∧
Text: Screenshot of the Problem 1 Solved Code and Output

ⓘ **Details:**
Only make edits where the template code mentions.

Solution should ensure that any passed in array will have only the odd values output.
Requires at least 2 screenshots (code + output from terminal)
Checklist   *The checkboxes are for your own tracking

#	Points	Details
☐ #1	1	Edits were done only in the processArray() method and original template code/comments remain untouched
☐ #2	1	Only arr is used (no direct usage of a1, a2, a3, a4)
☐ #3	5	Only odd values output (not odd indexes/keys)
☐ #4	1	Includes code comments with student's ucid and date
☐ #5	1	Terminal output is fully visible

Task Screenshots:

 Checklist Items (0)

 Checklist Items (0)

Part 1   Completed problem 1

● **Task #2 - Points: 1**
∧ COLLAPSE ∧
Text: Explain your solution

Problem 2 (3 pts.)

^ COLLAPSE ^

---

^ COLLAPSE ^

Task #1 - Points: 1

Text: Screenshot of the Problem 2 Solved Code and Output

ⓘ **Details:**

Only make edits where the template code mentions.

Solution should ensure that any passed in array will have its values converted to a positive version of the value AND converted back to the original data type.
Requires at least 2 screenshots (code + output from terminal)

Checklist

*The checkboxes are for your own tracking

#	Points	Details
☐ #1	1	Edits were done only in the getTotal() method and original template code/comments remain untouched (unless noted)
☐ #2	1	Only arr is used (no direct usage of a1, a2, a3, a4)
☐ #3	5	Passed in array's values get summed AND rounded to two decimal places like currency (i.e., 0.00, 0.10, 1.10)
☐ #4	1	Includes code comments with student's ucid and date
☐ #5	1	Terminal output is fully visible

Task Screenshots:

 🗑 Checklist Items (0)

terminal output	code

Task #2 - Points: 1

Text: Explain your solution

Checklist
*The checkboxes are for your own tracking

#	Points	Details
☐ #1	1	Clearly explains how the code/logic solves the problem (mentions both how the values get summed and how the rounding is solved correctly)

Response:

I added all the totals using a for loop and then made it into an int while first multiplying by 100 and adding .5 this is because when casting a double to an int it naturally rounds down so if i add .5 it will keep everything accurate and then i cast back to double and divide by 100.0 to keep all values.

Problem 3 (3 pts.)

^ COLLAPSE ^

Task #1 - Points: 1

Text: Screenshot of the Problem 2 Solved Code and Output

ⓘ **Details:**

Only make edits where the template code mentions.

Solution should ensure that any passed in array will have its values converted to a positive version of the value AND converted back to the original data type.
Requires at least 2 screenshots (code + output from terminal)

Checklist
*The checkboxes are for your own tracking

#	Points	Details
☐ #1	1	Edits were done only in the bePositive() method and original template code/comments remain untouched
☐ #2	1	Only arr is used (no direct usage of a1, a2, a3, a4)
☐ #3	5	Passed in array's values will get converted to a positive version AND converted back to the original data type
☐ #4	1	Includes code comments with student's ucid and date

● COLLAPSE ∧

Task #2 - Points: 1

Text: Explain your solution

Checklist

*The checkboxes are for your own tracking

#	Points	Details
☐ #1	1	Clearly explains how the code/logic solves the problem (mentions both the conversion to positive and conversion to original data type)

Response:

i used the instanceof keyword to seperate the data types the properly casted everything and the returned it back as positive using math.abs

● COLLAPSE ∧

Reflection (1 pt.)

● COLLAPSE ∧

Task #1 - Points: 1

Text: Reflect on your experience

ⓘ**Details:**

Talk about any issues you had, how you resolved them, and anything you learned during this process.

Provide concrete details/examples.

Response:

I had a lot of trouble with java things and had to ask my friends in higher level courses for help

i think i should review git because i was having trouble with it

^ COLLAPSE ^

Task #2 - Points: 1

Text: Include the pull request link for this branch

ℹ Details:

The correct link will end with /pull/ and a number.
